The 1-Hour AI Content Engine

Turn one voice note into a week of content.
Every week. Without burning out.

> *Most creators spend 10 to 15 hours a week making content. They write LinkedIn posts from scratch. They film TikToks one at a time. They stare at a blank newsletter draft every Sunday night. There's a simpler way.*

You record yourself talking about one topic for 10 minutes. AI turns that recording into everything else.

This is the system I use every week. One recording becomes a newsletter, 4 LinkedIn posts, 3 TikTok scripts, and a YouTube outline. The AI does the formatting and adaptation. I do the thinking and the talking.

What you'll get

- The 5-step system from recording to published content
- Exactly which AI tools to use at each step (all free or cheap)
- A weekly content schedule you can actually stick to
- The prompts I use to convert one transcript into multiple formats

Time to set up: About 2 hours the first time. Under 1 hour per week after that.

The 5-Step Content Engine

One recording, one hour, one week of content. Here's exactly how.

Step 1: Record yourself for 10 minutes

Pick one topic you have an opinion on. Open your phone's voice recorder or Descript. Talk naturally, don't script it. Just answer: "What do I think about this and why should anyone care?"

Rules: One topic only. Talk like you're explaining to a smart friend. It's fine to ramble. 10 minutes is plenty, never longer than 15.
Topic ideas: Something that happened this week · A question a client asked · A mistake you made · A popular opinion you disagree with · A tool that saved you time.

Step 2: Transcribe and clean (5 minutes)

Upload your recording to an AI transcription tool. Remove the "ums" and false starts. Fix names or technical terms. Don't rewrite your sentences, keep your voice.

Tools: Descript (built-in transcription), Whisper (free, local), or most AI assistants can transcribe audio directly.

Step 3: Generate your content pieces (15 to 20 min)

Feed the cleaned transcript to AI with specific prompts for each format. Give it your transcript and ask it to adapt your words. Starting from your transcript means every piece sounds like you.

PIECE	PROMPT APPROACH	LENGTH
Newsletter/blog	"Turn this transcript into a 1,000-word newsletter. Keep my voice. Add structure."	1,000 words
LinkedIn (main)	"Extract the strongest opinion. Write a hook, 3 to 5 points, one-line CTA. Under 200 words."	150 to 200
LinkedIn (3 more)	"Find 3 other angles in this transcript. Write a short post for each."	100 to 150 each
TikTok (2 to 3)	"Pull the most surprising points. Write 60-second scripts with a strong hook."	150 words each
YouTube outline	"Structure this into a 5 to 8 min video outline with intro, 3 to 4 sections, CTA."	Outline only

Step 4: Quality check (15 to 20 min)

Read everything AI generated. Check: **Does it sound like me?** If generic, rewrite or cut. **Is the opinion still mine?** AI softens your take, put the edge back. **Are the facts right?** AI invents statistics. **Would a client be OK seeing this?** If not, fix it. This is the step most people skip. Don't.

Step 5: Schedule and publish (10 min)

Monday: Newsletter goes out · **Tue to Fri:** One LinkedIn post per day · **Wed + Fri:** TikTok videos (batch-film both in one sitting) · **Weekend:** Film YouTube video using the outline (optional)

Scheduling tools: Buffer, Hootsuite, or a custom API setup.

What One Recording Produces

10-minute voice recording ↓ Transcribe and clean ↓ **Your cleaned transcript**
→ 1 newsletter/blog post (1,000 words) → 1 main LinkedIn post (hook + insight + CTA)
→ 3 additional LinkedIn posts (different angles) → 2 to 3 TikTok/Shorts scripts (60s each)
→ 1 YouTube video outline (5 to 8 min)
= 7 to 10 pieces of content from 10 minutes of talking

Weekly Schedule

DAY	WHAT TO PUBLISH	TIME
Sunday evening	Record, transcribe, generate all content	45 to 60 min
Monday	Send newsletter	Pre-scheduled
Tuesday	LinkedIn post 1	Pre-scheduled
Wednesday	LinkedIn post 2 + film TikTok	10 min filming
Thursday	LinkedIn post 3	Pre-scheduled
Friday	LinkedIn post 4 + film TikTok	10 min filming
Saturday	Film YouTube video (optional)	20 to 30 min

The Compounding Effect

Week 1: 7 to 10 pieces. Small audience, small reach. You're building the habit.

Week 4: 30 to 40 pieces. Algorithms start to notice consistency.

Week 12: 90+ pieces. Old content still getting views. New content gets pushed further.

Week 26: 180+ pieces. You have a content library that works while you sleep.

The system works because of volume and consistency. One recording a week keeps you ahead of 95% of people in your industry who post sporadically or not at all.

Common Mistakes

- **Trying to be original every time.** You only need one idea per week. The pieces are different angles on it.
- **Spending too long on quality.** Done and published beats perfect and sitting in drafts.
- **Skipping the voice recording.** Start with AI instead of your voice and everything sounds generic.
- **Posting everything on the same day.** Spread it across the week. Consistency beats bursts.

About the Author

Jamie Oarton is a fractional Chief AI Officer through Bramforth AI, helping UK mid-market companies (£20M to £100M revenue) build AI strategies that actually connect to how they make money.

He has advised on AI strategy at the highest levels of UK government, military, and diplomatic services, and has delivered AI training to senior British Army officers.

Jamie works with companies that know AI matters but don't have a plan, building strategy, setting governance, and making sure AI investments deliver measurable results rather than expensive experiments.

AI Diagnostic

A 2-day audit of where you are, what's working, and what to do next.

~£2,500

Fractional CAIO

1 to 2 days per week embedded in your leadership team, building strategy, governance, and capability.

From £4,000/month
