The 1-Hour AI Content Engine

One recording. Four outputs. A week of content.

> *You sit down on Sunday night to write a LinkedIn post and stare at the cursor. You film a TikTok and start over four times. You skip the newsletter because there is no time. By Friday you have published one thing, maybe two. Next week is the same.*

The fix is not "post more". The fix is to stop creating content from scratch every time.

Record yourself talking about one topic for ten minutes. Use the four Claude skills inside this playbook to turn that one recording into a LinkedIn post, a short video script, a long video outline, and a newsletter. Each skill takes seconds to run once you have installed it. The whole process from recording to scheduled content is about an hour.

What's inside

- The four free Claude skills, ready to install in 10 minutes
- Step-by-step install for Claude Desktop and Claude Code
- A first-week action plan you can start today
- The trigger phrases that make each skill work

Time to set up: 10 minutes. **Then:** Under an hour per week.
You will need: Claude Pro or Max (Skills require these plans).

How It Works

One recording. Four skills. Four pieces of content. About an hour total.

1. **Record** yourself talking about ONE topic for 10 to 15 minutes
2. **Transcribe** the recording (any AI assistant can do this)
3. **Run the four skills** on the transcript, one at a time:

   linkedin → 150-word LinkedIn post
   short-video → 60-second TikTok or Reels script
   long-video → 5 to 8 minute YouTube outline
   newsletter → 1000-word newsletter or blog post

4. **Edit and publish** across the week

Why This Works

Most AI content sounds like AI because it starts with "write a LinkedIn post about X". The model invents content with no opinion, no voice, no perspective. Generic. Forgettable.

Starting from your voice recording is different:

- The opinion is already yours
- The phrases are already yours
- The examples and stories are real

The skill's job is to compress and shape, not to create. That is why the output sounds like you, not like AI.

The discipline

Pick **one** topic per recording. Trying to cover three things kills every output.

Install the Skills

Two options. Most people should use Claude Desktop. Use Claude Code only if you are already using it for something else.

Option A: Claude Desktop (recommended)

The Skills feature is on the Customize menu. You upload one skill at a time as a `.md` file. Repeat four times.

1. Download each skill file from the links below (right click → Save link as)
2. In Claude Desktop, click your name → **Customize**
3. Click **Skills**
4. Click the **+** button → **+ Create skill** → **Upload a skill**
5. Drag the SKILL.md file in (or click to upload)
6. Repeat for the other three skills

Download links (right click → Save link as):
linkedin → `github.com/jamieoarton/skills/raw/main/plugins/content-engine/skills/linkedin/SKILL.md`
short-video → `github.com/jamieoarton/skills/raw/main/plugins/content-engine/skills/short-video/SKILL.md`
long-video → `github.com/jamieoarton/skills/raw/main/plugins/content-engine/skills/long-video/SKILL.md`
newsletter → `github.com/jamieoarton/skills/raw/main/plugins/content-engine/skills/newsletter/SKILL.md`

Tip: Rename each downloaded file (linkedin.md, short-video.md, etc) before uploading. Otherwise they all save as SKILL.md and your downloads folder gets confusing.

Option B: Claude Code (technical users)

If you already use Claude Code, install all four skills with two commands typed inside Claude Code:

```
/plugin marketplace add jamieoarton/skills
/plugin install content-engine@jamieoarton-skills
```

Verify it worked

Start a new conversation and say: *"I have a transcript from a recording I want to turn into a LinkedIn post."* If the skill is installed, Claude will recognise it and ask for the transcript.

The Four Skills

Each skill has one job. Use them one at a time on the same transcript. Most people start with `linkedin` because it is the fastest output to publish.

linkedin

What it does: Turns your transcript into a 150-word LinkedIn post.

Trigger phrase: *"Turn this transcript into a LinkedIn post"*

You provide: The transcript, plus the single most important takeaway you want the reader to have.

You get: A short post with hook, context, main point, takeaway, optional question. British English. No hype words.

short-video

What it does: Turns your transcript into a 60-second talking-head script for TikTok, Reels, or Shorts.

Trigger phrase: *"Turn this into a short video script"*

You provide: The transcript, plus the single most surprising or contrarian thing in it.

You get: A 140-160 word script with hook (3s), payoff (5s), body (45s), close (7s). Plus a caption.

long-video

What it does: Turns your transcript into a 5 to 8 minute YouTube video outline.

Trigger phrase: *"Turn this into a YouTube video outline"*

You provide: The transcript, the main takeaway, and who the viewer is.

You get: A timed outline with bullet points and your strongest phrases marked for verbatim delivery.

newsletter

What it does: Turns your transcript into a 1000-word newsletter or blog post.

Trigger phrase: *"Turn this into a newsletter"*

You provide: The transcript, takeaway, audience, and what they should do differently after reading.

You get: A 1000-word piece with title, intro, four to five sections, and a close. Your voice preserved throughout.

Your First Week

A simple action plan. Start today, publish all week.

Today (10 minutes setup + 15 minutes recording)

1. Install the four skills using Page 3
2. Pick a topic. Anything you have an opinion on. A question a client asked you. A mistake you made. A tool that saved you time.
3. Open your phone's voice recorder. Talk for 10 minutes about that one topic. Do not script it. Pretend you are explaining it to a smart friend over coffee.
4. Stop after 10 to 15 minutes maximum.

Tonight or tomorrow morning (30 minutes)

1. Transcribe the recording. Drop the audio into Claude (or Whisper, Descript). Get the text out.
2. Open a new conversation in Claude. Paste the transcript.
3. Run the four skills, one at a time, using the trigger phrases from Page 4.
4. Read each output. Edit anything that does not sound like you. Cut, do not rewrite.

This week

DAY	ACTION
Monday	Send the newsletter
Tuesday	Post the LinkedIn post
Wednesday	Film and post the short video
Thursday or weekend	Film and upload the YouTube video using the outline

That is one recording, four pieces of content, four days of publishing.

Next week

Do it again. With a different topic. The whole point is consistency, and consistency only works when the system is fast enough that you actually use it.

Common Questions

How long should my recording be?

10 to 15 minutes maximum. Shorter is fine. Longer is worse - the skills work best with focused source material.

What if I ramble?

Good. Talk naturally. The skills clean it up. Do not script your recordings - that is what makes them sound like AI.

Can I run the skills without a transcript?

You can, but you will get generic AI output. The whole point is that the skills work from your real words. Always start with a recording.

Can I edit the output?

Yes. You should. The skills produce a strong first draft, not a finished post. Cut anything that does not sound like you.

Which Claude plan do I need?

Pro or Max. Skills are not available on the free plan.

Can I use these skills for paid client content?

Yes. The skills are MIT licensed. Use them however you like, including commercially.

What if I want to change how a skill works?

Open the SKILL.md file and edit it. The trigger phrases, the rules, the output format - everything is editable. That is the point of skills over closed tools.

Where do I get help if I get stuck?

The skills repo has full documentation: `github.com/jamieoarton/skills`. Or visit jamieoarton.com for the latest version of this playbook and weekly content on practical AI.

About the Author

Jamie Oarton is a fractional Chief AI Officer through Bramforth AI, helping UK mid-market companies (£20M to £100M revenue) build AI strategies that actually connect to how they make money.

He has advised on AI strategy at the highest levels of UK government, military, and diplomatic services, and has delivered AI training to senior British Army officers.

Jamie works with companies that know AI matters but don't have a plan, building strategy, setting governance, and making sure AI investments deliver measurable results rather than expensive experiments.

AI Diagnostic

A 2-day audit of where you are, what's working, and what to do next.

~£2,500

Fractional CAIO

1 to 2 days per week embedded in your leadership team, building strategy, governance, and capability.

From £4,000/month

Want to Talk?

If this resource was useful and you'd like to explore whether a fractional CAIO makes sense for your business, the first conversation is always free and no-pressure.
